Geomagnetic Activity

	Current Conditions	24 Hour Forecast	24 to 48 Hour Forecast
Polar	Yellow	Yellow	Yellow
Auroral	Yellow	Yellow	Yellow
Sub-auroral	Yellow	Yellow	Yellow

Current Conditions

- Polar: unsettled
- Auroral: quiet
- Sub-Auroral: quiet

24 Hour Forecast

- Polar: quiet+ unsettled intervals
- Auroral: quiet
- Sub-Auroral: quiet

Review and Forecast

24 Hour Review

Near-Earth environment

	Current Conditions	Day 1 Forecast	Day 2 Forecast
GEOS	Yellow	Yellow	Yellow

Current Conditions

- electron fluence at geostationary orbit: moderate

Day 1 Forecast

- electron fluence at geostationary orbit: normal

Energetic Electron Fluence

Observed: 15:05 UT

Forecast: 15:05 UT

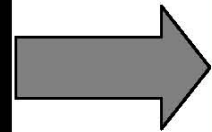

Current conditions: 15:05 UT

Fluence (electrons/cm²-sr-day)

Scale: 10⁰ to 10¹⁰

Legend: Quiet, K3 Unsettled, K4 Active, K5 Stormy, K7/major Storm

Critical Infrastructure Operators

A control room with several operators seated at desks with multiple computer monitors. The room is dimly lit, with light coming from the screens.

1. Multi-Agency Situational Awareness System Development Initiative (MASAS)

MASAS is a multi-stakeholder federally-led initiative that aims to develop and support capabilities that will enable the sharing of location-based situational awareness information and alerts between emergency management and response agencies using open standards and an open architecture. The MASAS initiative is led by the Defence R&D Canada – Centre for Security Science, in partnership with Public Safety Canada and Natural Resources Canada involving federal, provincial, territorial and municipal governments, non-governmental organizations and industry.

2. Meeting with GOC, to develop the federal response to space weather events (SW), to initiate a risk overview process to determine the need for the following:

- (1) a federal plan or protocol for responding to space weather events affecting Canada
- (2) a federal level working group to develop the plan or protocol.

Expected Output: risk overview document highlighting whether or not there is a need for a Government of Canada space weather plan or protocol.
