

Turkish State Meteorological Service:

Turkish State Meteorological Service (TSMS), the only governmental organization which provides all meteorological services in Turkey, was founded in 1937.

TSMS is a member of WMO since 1949 and represented in all Technical Commissions, and hosts one of the Regional Training Centres of WMO and tries to meet the training needs of the NHMSs of member states.

TSMS is also a member of European Meteorological Organisations such as EUMETSAT, ECMWF and ECOMET. Some sessions of the administrative and/or technical bodies of these organisations were hosted by TSMS. The ninth Scientific Conference on Weather Modification which was held in 2007 was also hosted by TSMS in Antalya.

Every year, TSMS hosts a number of important international meetings on meteorology, climatology and related fields.
