**Ozoneonde observations**

---

This page contains various diagrams and graphs illustrating observations of the Antarctic ozone hole from 2003 to 2014. The diagrams showcase temperature and ozone data, highlighting trends and anomalies over the specified period. The images include temperature anomaly charts, ozone hole area plots, and satellite maps, providing a comprehensive view of the ozone hole dynamics. The data is sourced from various institutions and organizations, indicating a collaborative effort in monitoring and understanding the ozone layer's condition.
