The Sub-seasonal to Seasonal (S2S) Prediction Project

“Bridging the gap between weather and climate”

Co-chairs:
Frédéric Vitart (ECMWF)
Andrew Robertson (IRI)
Mission Statement

● “To improve forecast skill and understanding on the sub-seasonal to seasonal timescale with special emphasis on high-impact weather events”

● “To promote the initiative’s uptake by operational centres and exploitation by the applications community”

● “To capitalize on the expertise of the weather and climate research communities to address issues of importance to the Global Framework for Climate Services”
S2S project

- Implementation plan finalized & printed
- Terms of references have been drafted
- 5-year project, started in Nov 2013.
- Project office: KMA/NIMR hosts the project office in Jeju island.
- Trust Fund: Contributions from Australia, USA and UK
Interactions and teleconnections between midlatitudes and tropics

Madden-Julian Oscillation

Monsoons

Africa

Extremes

Verification

Research Issues
- Predictability
- Teleconnection
- O-A Coupling
- Scale interactions
- Physical processes

Modelling Issues
- Initialisation
- Ensemble generation
- Resolution
- O-A Coupling
- Systematic errors
- Multi-model combination

Needs & Applications
Liaison with SERA
(Working Group on Societal and Economic Research Applications)

S2S Database
Conferences/Education outreach

- Nov 2013: S2S workshop organized by the S2S ICO (Jeju, Republic of Korea)
- Dec. 2013: S2S session at AGU conference
- Feb 2014: International conference on sub-seasonal to seasonal prediction – NCEP –
- Aug. 2014: WWRP Open Science Conference –Montreal, Canada: S2S sessions (26 oral presentations in 6 sessions) + white paper
- June 2015: 3-day workshop organized by the ICO (Jeju, Republic of Korea) on Sub-seasonal to seasonal predictability of monsoons.

- Oct 2014: Training course was co-organized with APCC in Busan (Republic of Korea)- It was attended by 18 participants from national meteorological services in 16 developing countries working on climate and weather forecasting, with funding from APCC.
- Nov, 2015: 2 week training course at ICTP (Trieste, Italy) for young scientists from developing countries
International Conference on Sub-seasonal to Seasonal Prediction  
(NCEP- 10–13 February 2014)

- Over 150 participants from 16 countries. 60 oral presentations and 80 posters
- This conference gave a clear indication of the growing interest that sub-seasonal predictions are getting. Week 3 and 4 is seen as the new frontier for predictability research
- Several presentations emphasized the importance of the weather-climate linkage, addressing the challenge of “end-to-end” forecasts for operations, applications and climate services.
- Conference abstract to appear soon in the Bulletin of The American Meteorological Society
S2S sub-projects
MJO Subproject

MJO and Maritime Continent (MC) Interactions: Evaluating State of the Art & Characterizing Shortcomings

In collaboration with the WGNE MJO Task Force

Major Objectives:
• Assess current model simulation fidelity and prediction forecast skill over the MC across time scales, with emphasis on the MJO, and identify and rectify model biases.
• What roles do: 1) multi-scale interactions, 2) topography and land-sea contrast, and 3) ocean/land-atmosphere coupling play in the MC-MJO interaction and how do they influence predictability over the MC.

Modeling Resources to Exploit
• 1) S2S Database, 2) MJOTF-GASS Multi-Model Exp and 3) ISVHE

Potential Future Field Campaign
• Year of Maritime Continent (YMC) is a growing multi-nation effort to carry out a field campaign over the MC in 2017 to address objectives such as those above.

Tentative Development
• Spring 2016 Workshop for Subproject – S2S, MJOTF

Nexus of 1) land, atmosphere & ocean interactions and 2) multi-scale interactions: diurnal, mesoscale, synoptic, subseasonal, seasonal & interannual.
Main Goal
To develop skilful forecasts on the S2S time scale over Africa and to encourage their uptake by national meteorological services and other stakeholder groups.

Objectives:
• Assess the performance of forecasts for 5-40 days ahead using the S2S forecast archive, with focus on rain-day frequency, heavy rainfall events, dry spells and monsoon onset/cessation dates, with relevance to agriculture, water resources and public health.
• Develop metrics for measuring the success of forecasts in ways that are useful for farmers and other stakeholder communities.
• Improve understanding of the climate modes that drive sub-seasonal variability in Africa and their representations in models.
• The Africa sub-project will work with post-Africa Climate Conference 2013 framework (recently named “Climate Research for Development CR4D”) to connect international with African climate communities. An S2S activity is envisaged to be one of the first CR4D pilot activities, through a joint CR4D-S2S proposal to Future Earth program funding.
Major Objectives:

- Development of a set of scientifically and societally relevant intra-seasonal forecast products and metrics that are applicable to all the major monsoon systems which can be monitored with operational real-time forecast systems.

- Case studies of monsoon onsets

The S2S and ISVHE databases can be used to assess the skill of the forecasting systems to predict the onset of the various monsoons.

A compilation of the observed monsoon onsets has been produced and is available from the S2S website.
Extreme weather sub-project

Major Objectives:

- Evaluate the predictive skill and predictability of weather regimes and extreme events (droughts, floodings, heat and cold waves)
- Assess the benefit of multi-model forecasting for extreme events
- Improve understanding of the modulation of extreme weather events by climate modes.
- Sub-seasonal prediction of tropical storms (link with TIGGE-GIFS and SWFDP)
- Case studies selected for the strong societal impact

A case study already completed: March 2013 cold wave over Europe. Results published in Meteoworld.

This sub-project will have links with HIW. A member of HIW (Brian Golding) will be part of this subproject.
Major objectives:

- Recommend verification metrics and datasets for assessing the forecast quality of S2S forecasts
- Provide guidance for a potential centralized effort for comparing forecast Quality of different S2S forecast systems, including the comparison of multi-model and individual forecast systems and consider linkages with users and applications.

Issues to be addressed:

- Identification of current practises in sub-seasonal to seasonal forecasts
- Identification of user-relevant variables and quantities to be verified
- Provision of guidance on minimum hindcast standards (hindcast length and ensemble size)
- Promotion of subseasonal forecasting intercomparison efforts and evaluation of benefit of multi-model approach.
Major objectives:

- Better understand sub-seasonal tropical-extratropical interaction pathways.
- Identify periods and regions of increased predictability (“forecasts of opportunity”)
- Improve sub-seasonal to seasonal forecasts of weather and climate for applications.

Issues to be addressed:

- Understand physical mechanisms of tropical-extratropical interaction
- Develop new comprehensive estimates of tropical diabatic heating
- Identify main errors associated with teleconnections.
S2S sub-projects

• The science plans of the 6 sub-projects have been discussed and finalized in the S2S steering group meetings. Updates to these plans are anticipated on an ongoing basis (www.s2sprediction.net)

• It is planned to open the membership of the sub-projects to persons outside the S2S steering group, to have a total membership for each sub-project of around 5-6 members.

• Cross-cutting activities which are relevant to all the sub-projects (predictability, teleconnections, role of ocean-atmosphere coupling..) will also take place.

• Sub-project activities are strongly dependent on the development and availability of the S2S database.
Database
Database Description

- Daily real-time forecasts + re-forecasts
- 3 weeks behind real-time
- Common grid (1.5x1.5 degree)
- Variables archived: about 80 variables including ocean variables, stratospheric levels and soil moisture/temperature
- Archived in GRIB2 – NETCDF conversion available
- Database to open in 2015, initially with 3 models (ECMWF, NCEP and JMA)
TIGGE-S2S Database

11 data providers and 2 archiving centres

- Data provider
- Archiving centre

Development of the S2S database

1) Define S2S data in GRIB2 (re-forecasts, daily means, new parameters…)

All the changes have been submitted to WMO and have been officialised in May 2014,

2) ECMWF software has been updated to include these changes.

3) Web page documentation on how to code and handle S2S data has been set up

4) Test data: All partners have provided S2S test data. 7 partners are now ready for data exchange: CAWCR, ECMWF, NCEP, JMA, CMA, HMCR and Météo-France.

5) Data exchange started:
   - Re-forecasts from JMA, CAWCR, NCEP and ECMWF archived in S2S database
   - Real-time forecasts from ECMWF, NCEP, JMA and CAWCR routinely archived in S2S database.
   - CMA and Meteo-France re-forecasts acquisition is in progress
- Partners have been asked to provide data as close as possible to real-time
- Access from data portal restricted to 3-weeks behind real-time

Linkage with SNAP

Impact of SSWs on forecast skill scores

From Om Tripathi
A strong link is already established with the WGNE MJO task Force. Other possible joint projects include:

- **Representation of teleconnections in dynamical models (tropics- extratropics, tropics-monsoons, high latitudes-mid latitudes..)***
- Systematic errors in the monsoon regions, with a particular focus on variability, not only mean biases.
- Impact on initialization on S2S (coupled data assimilation, ensemble perturbations, lag vs burst sampling..)

Joint session at the next Systematic Errors Workshop (2016).
