## Coordination mechanisms

WEATHER CLIMATE WATER  
TEMPS CLIMAT EAU

WMO OMM

World Meteorological Organization  
Organisation météorologique mondiale

## Leverage pre-existing coordination mechanism

- WGNE on weather climate and atmospheric composition. To be extended to include operations.
- TIGGE. Good example of cooperation between NWP Centres that can be used as best practice for collaboration between WMCs.
- Enhance existing cooperation between WMCs on the following areas:
  - Numerical models
  - Post-processing.
  - Observations.
  - New observations instruments such as Hyperspectral infrared sounding, payload FY-4A demonstration ..

## How can we attract strong interest from donor and stakeholders

- Make clear to the external stakeholders the benefits to make selling points to attract interest and foster coordination.
- To engage with private sector it is important to have a public/private engagement framework.
- Insurance market can have interest and have impact at regional and national level.

## Design of coordination mechanism and roles of each players

- We need to have RSMCs with clear area of responsibility.
- Specific objectives and projects can generate collaboration.
- There are already links between Met Centres and disaster management centres that need to be strengthened.
- Forum for technical coordination between WMC and RSMC.
- Coordination to make sure that types of products are consistent between different WMC and RSMC for interoperability reasons.
- Coordination between WMCs to produce multi-model products.

# Thank you Merci
